

N-SSTimer

NPI's Single Shot Timer or # N-SSTIMER is an adjustable batching timer which is initiated by a push of a button. This device is ideal for applications that require an adjustable timed operation which can only be activated by the push of a button. This product is capable of switching 10 amps at 115 VAC and has an internally adjustable timer from 0.1 second to 600 hours. The adjustment of the timer is inside the box. Please disconnect from power source before adjusting timer.

Operation: Open enclosure and adjust timer for run operation time. Keep in mind that this time adjustment is the run time or on time that the power will be on to the female receptacle. Close enclosure plug into 115 VAC and push start button when ready to run a timed cycle. After timed cycle times out the power to the female receptacle will stay off until the next time the button is pushed.
